Highlights

Bone regeneration is the main concept around which the Biomaterials Division of CREB UPC, directed by the researcher Maria Pau Ginebra, develops its research. Among other projects, an exoskeleton designed and developed in the Biomechanical Engineering Lab (BIOMEC) of the Universitat Politècnica de Catalunya, and participated in by the researcher... The ABLE exoskeleton, designed and developed in the Biomechanical Engineering Lab (BIOMEC) of the Universitat Politècnica de Catalunya, and participated in by the researcher...

The UPC participates in the First Cybersecurity & Ethical Hacking Congress that is being held as part of the Cyber Ethical Days initiative. The Congress aims to promote technological innovation and entrepreneurship in the field of cybersecurity.

Acknowledgments

The project of a CREB-UPC researcher to rehabilitate people with spinal cord injuries has begun to receive a Leonardo Grant. The project, which is directed by the researcher... Technological capabilities

Health

We work on a wide range of projects with an interdisciplinary approach and the involvement of experts from different areas of technology. These projects focus on the development of applications, systems, and services for improving the quality of life, health, and well-being. The project of a CREB-UPC researcher to rehabilitate people with spinal cord injuries has begun to receive a Leonardo Grant. The project, which is directed by the researcher...
